BELOTERO®

BELOTERO®'s range of CPM fillers are tailor-made to adapt to different facial areas and injection depths.

BELOTERO® helps refine facial details, enhancing your natural features for a smoother, more harmonious and naturally radiant appearance.

RADIESSE®+

Radiesse® is composed of calcium hydroxylapatite (CaHA) microspheres suspended in an aqueous gel carrier.

Radiesse® offers a unique triple effect of:

- + Vertical Lifting
- + Defining Contours
- + Stimulating Natural Collagen Production

XEOMIN®

The Pure Botulinum Toxin :

- Lower risk of neutralising antibody formation
- Lower risk of developing botulinum toxin resistance
- Safe, effective and natural-looking results after every treatment

PICOSURE[®] *pro*

The PicoSure[®] Pro device uniquely delivers 755nm energy in picoseconds; the delivery is so quick that it spares the skin from high thermal damage while optimally targeting unwanted pigment, wrinkles, acne scars and pores with less downtime than traditional lasers.

DERMA V

The DermaV[™] laser is a novel 532nm wavelength laser treatment with cryogen cooling that is the ultimate solution for eliminating unwanted reds and browns. Providing customizable treatments for vascular and pigmented lesion reduction, DermaV[™] Variable Sequential Pulsing (VSP) precisely targets vessels of varying sizes and amplifies tissue effects without increasing fluence for improved results.

ULTRA[™]

The ULTRA[™] laser rebuilds glowing, healthy skin through non-ablative fractionated treatments. Tunable from mild to aggressive and extremely cost-effective, ULTRA[™] offers customised tone and textural improvements with virtually no downtime for patients of all skin types, all year round.

XERF

The XERF[™] system offers the world's first multifrequency monopolar RF treatment. By combining both 6.78 MHz and 2 MHz frequencies, XERF[™] can deliver energy not just deeper, but exactly where patients need it most. Wave Fit[™] pulse and Advanced Integrated Cryogen Delivery cooling technology control energy delivery while maintaining surface temperature.

DENSITY

A revolutionary dual-mode radiofrequency device, DENSITY synergistically combines sequential monopolar and bipolar RF to stimulate patients ability to build collagen. Customizable cryogen cooling and real-time impedance calibration ensures optimal comfort and consistency.

UltraClear®

UltraClear® is a groundbreaking innovation in skin rejuvenation. Powered by first-of-its kind cold fiber laser technology, UltraClear® helps to reverse signs of aging, addressing multiple skin conditions in one treatment to help patients look their best—quickly, safely, and effectively.

AviClear®

AviClear® is the first and original FDA-cleared laser for the long-term treatment of mild, moderate, and severe inflammatory acne.

Using a 1726nm wavelength, AviClear® selectively targets and suppresses sebaceous glands, reducing sebum production to help clear active acne and prevent future breakouts.

Deusaderm_{LIDO}

Sunmax Deusaderm LIDO is an injectable collagen gel derived from SPF porcine skin, purified using Sunmax Bloxtech's patented platform, closely resembling human collagen to effectively restore dermal volume and promote a natural, youthful appearance.

ASCE^{plus}

Specializing in advanced, regenerative exosome technology, ASCE Plus enhances skin rejuvenation, hair restoration, and skin healing by boosting collagen production and accelerating cellular renewal.
